

Amendments to the Specification:

Please replace paragraph **[0024]** with the following rewritten paragraph:

[0024] In yet another embodiment, the laminated structure is constituted of, at least, an outer layer, and an inner layer formed of a synthetic resin having a ~~lower~~low compatibility with a synthetic resin forming the outer layer. In this case, it becomes possible to form the container comprising the synthetic resin-made outer layer forming an outer shell in a fixed shape and the synthetic resin-made inner layer which forms an inner bag laminated to the outer layer in a peelable manner, thereby allowing to use the container as a so-called "laminated peelable container".

Please replace paragraph **[0070]** with the following rewritten paragraph:

[0070] Embodiment 8 of laminated molded article 9 is to constitute a laminated structure including: an outer layer 1a molded as an outer shell having a required ability for holding a self shape, and made of a synthetic resin material such as polyethylene, polypropylene, and PET; and an inner layer 1c molded into a bag shape capable of flexible deformation, and made of a synthetic resin material such as nylon, ethylene-vinylalcohol copolymer and polyethylene terephthalate, which has a ~~lower~~low compatibility with the outer layer 1a; thereby allowing to provide a laminated peelable container.
